Full Stack engineer with 4 years of experience in Web Development. I would love the opportunity to contribute to your team!

Education

The University of British Columbia

January 2021 — January 2018

Bachelors in Computer Science

The University of Minnesota Duluth

January 2015 — January 2011

Bachelors in Mathematics & Economics

Experience

Senior Software Engineer

May 2020 — Present

Target Corporation

- Collaborated with a team of business leaders, engineers, designers, and product owners in the design and implementation of new, built from scratch, e-commerce platform for the bulk purchase of Gift Cards by Business Clients. Including external, internal, and agent facing web apps. Our platform went live in June 2024 and is on track to facilitate over \$250 million in revenue this year.
- Implemented User Interfaces using Next.JS, React, Typescript, React Query, and Webpack.
- Developed a PCI compliant micro-frontend that was built using Webpack Module Federation and deployed as a static javascript bundle to Google Cloud Platform.
- Designed and implemented frontend and backend performance monitoring and alerting patterns using InfluxDB, Kibana, Grafana, and Shuttie IO.
- Developed REST API Microservices using Micronaut and Kotlin.
- Led the production environment set up and roll out effort. We had a clean prouction go live with no major incidents.
- Led the security development efforts including setting up frontend and backend controls to prevent known attack vectors. Prioritizing secure development from the beginning resulted in our PEN tests coming back with no major findings, saving us time and resources.
- Designed and built a Kafka filtering service that allowed the team to test our data migration in a "Go-Live" environment while ensuring that production PI data would not leak into lower environments.
- Supported the team through mentorship of Interns and Engineers.
- Developed two side project tools, git1s and git-history, that are used by engineers throughout Target Tech to more effectively use Github.

Full Stack Developer

January 2020 — January 2021

Lively Apps

- Developed and maintained apps currently available on the Atlassian marketplace for Confluence and Jira. Including Pocket Query, Task Reminder, Hide Elements, Usage Statistics for Confluence and more.
- Win second place in the 2020 Codegeist hackathon for the Lively Recorder.
- Developed frontend features using Typescript, JQuery and React.
- Developed backend features using Java and Spring
- Solved support tickets, interacting directly with customers.

Software Quality Assurance Intern

January 2019 — January 2019

Garmin

- Designed and built an internal tool that automated the scraping of test data from Garmin devices, saving QA engineers hours of time each week.
- Authored and maintained well organized test cases
- Developed internal tools using Python and C++

Skills

Frontend: HTML, CSS, SCSS, Styled Components, Javascript, Typescript, React, Next, Webpack, Module Federation

Backend: Node, Deno, Kotlin, Java, Micronaut, Spring, Mongo, Postgres, Redis

Devops: Google Cloud, Terraform, Fastly CDN, Vela, Automated CI / CD
